EXPOSES BOGUS DEMO ARGUMENT ON PROSPERITY

CONTINUED FROM PAGE ONE

It is not the extremes from which fair judgment can be derived in any case. But to present the case fully Mr. Price should have called attention to the fact that not since the presidential election of 1912 and 1916 has the country experienced such extreme industrial depression as during the two years from September, 1913, to September, 1915.

That the United States industrially has experienced the most prosperous year in its history, from September 1, 1915, to September 1, 1916, cannot be disputed. Neither can it be disputed that not in twenty years has the country experienced such a bad year industrially as was the year 1914; and the worst 24 months in the industrial history of the past two decades were those from September 1, 1913, to September 1, 1915.

If the Democratic administration is entitled to the credit which it claims for the prosperity of the past 12 months, it is not just as much entitled to blame for the hard times of the preceding 24.

In connection with that period of industrial depression, one fact should not be overlooked. While the manufacturing industries of the country, except in a few specially favored lines, were at their ebb during the two years mentioned, the country was favored agriculturally with good crops, which to a considerable degree offset the general depression in manufacturing centers.

Of course it is just as fair for the Democrats to take to themselves credit for the kindness of providence and nature in the production of good crops, but the same kind of credit, if the Republicans have done many times in the past. Thinking people, however, know that politicians and administrators of either party are not entitled to credit for agricultural prosperity or for improved conditions in those particular lines that are directly influenced by climatic and weather conditions.

Neither will a person with an analytic mind admit that any administration or party, Democratic or Republican, can justly claim credit for prosperity that comes, as has that of the United States during the past year, through extremely abnormal international conditions, in which the industrial gain of one nation is based so largely on the misfortunes and sufferings of other nations.

Admit Prosperity. But for the sake of argument, admitting to the Democrats all of the prosperity for 1916 which Mr. Price so ably presents and credit for which he so justly applies to the present administration, let us look at the two years immediately preceding the 12 months that have just passed. Two years for one certainly is more than a fair exchange.

The close of 1912 can be taken as a period of just about normal industrial conditions in the United States. During the ten months following the election in November, 1912, there was a natural disturbance and business readjustment, but that was more because of what certain business interests thought that President Wilson and his incoming Democratic associates were going to do than because of any conditions that actually existed. Accordingly, the administration cannot in any way be blamed for what happened during those ten months.

By September, 1913, however, the new administration had begun to show its hand; the extraordinary session of congress had demonstrated what was to be expected in the tariff line, and industrially the country was in full swing under Democratic policies.

Not since the beginning of President Cleveland's second term has the industrial depression in this country been more marked and rapid than during the two years from September 1, 1913, to September 1, 1915. That this was stayed to a considerable extent by the exceptionally good agricultural conditions has already been noted; but even good crops could not fill the mouths of the millions of thousands of thousands of workmen with whom the country teemed by the early months of 1914.

Even with the marked increase in the manufacture of cotton goods and other staples in the south during the past twenty years, it can still be said that fully nine-tenths of the manufacturing is done in that part of the country north of Mason and Dixon's line and east of the Missouri river. It is to conditions that existed in that section of large population and factories wheels that readings must be taken from the industrial thermometer to get at the exact conditions. It would be just as fair to measure the heat of the southern city where this is written by placing a thermometer upon the sun-baked pavement between the heat reflecting brick walls at the hottest time of the day as it is to measure industrial prosperity by selected facts pertaining to a short period of time, as do Mr. Price and other advocates of the administration.

Manufacturers Fall Off. Taking the manufacturing industries in the large part of the country just mentioned as a whole, during the ten months following September 1, 1913, they had shown a falling off such as has never marked a corresponding period in the history of this country. In a few specially favored lines, just as there always must be, there were exceptions to this rule. Physicians change in that line several months before the Wilson tariff was enacted. In November, 1913, that great woolen mill was shut down entirely, and not a wheel in it has ever turned since, and in which the overworked people being thrown out of employment.

The knitting mills of Utica and at other nearby places in the Mohawk valley at the time mentioned were running at about 60 per cent of normal. At Syracuse one great typewriter plant was shut down entirely, and at Elton and Syracuse the other typewriter plants were running at about half of the capacity.

Strange as it may seem, even the starch industry at Oswego had fallen off more than one-third. At the cordage factories and agricultural implement works at Auburn, the pump works at Seneca Falls, the iron mines at Port Henry, and the locomotive works at Dunkirk the work was everywhere the same—working from 70 per cent down to 40 per cent or less of the normal output.

It was not until the plaster-board factory at Lockport was visited that a single factory was found in the state that was working to its capacity and in which the overworked people required the erection of an addition at that time.

What was true in New York at that time and during the following months applied also to a large majority of the manufacturing industries from Omaha to Bangor.

One of the proprietors of one of the largest silk mills in the country told me in the fall of 1914 at Hartford, Conn., that his factory had been running short-handed and on part time, making about 60 per cent of the normal output, for several months, but that the accumulated stock had become so large that the next week they were going to shut down entirely for a time and then try to go ahead at about half capacity.

Just Became Worse. During the first eight or ten months after the war began in Europe the industrial conditions in this country did not change much in most lines, except to become worse instead of better. By January, 1915, the steel industry had begun to pick up a little, but it did not reach the normal output until the next year, and it is only during the past ten months that that industry has enjoyed such phenomenal prosperity.

The automobile industry is the most important that has been marked by a steady increase during the entire period of the present administration. Because of that Detroit, the center of the automobile industry, has been one

TAMPA PROTESTS AT CUBS' CHANGE

CHICAGO, Oct. 24.—Announcement that the Chicago club of the National league is to switch its 1917 spring training camp from Tampa, Fla., to Pasadena, Cal., has aroused a strong protest from the Tampa Baseball association, according to word received here.

President Weeghman of the Chicago club, however, is going forward with plans to take his players to the coast. Weeghman is eager to make the trip, for he believes the team will be an excellent drawing card there, and that the players will be greatly benefited by the change of scene.

There is no objection to Tampa as a training camp," President Weeghman said, "but there was not enough enthusiasm shown there. The fans did not come out and support the players did not make much interest in their work. It was so in Pasadena. I am sure it will be the largest party

that ever left Chicago as a baseball squad. Between 150 and 200 fans will be taken to the trip. The start probably will be made about February 10."

The Tampa Baseball association, which it will hold the Chicago club to its contract to train in Tampa in 1917 and 1918. President Weeghman, however, hopes to arrange to have some other major league club assume the contract. The Indianapolis club of the American association wants to go to Tampa.

At Amsterdam the broom factories were working 50 per cent of normal, and the large knitting mills about 60; but the knitting mills of that city, employing many thousand hands, were decreased to less than 50 per cent within a few weeks after I visited that place.

In Schenectady, where the great electrical works and locomotive works are the principal industries, in the latter part of 1913 giving employment to nearly thirty thousand hands in the two plants, the working force had been decreased 25 per cent and those still employed were working four and five days a week.

In Utica, until the Democratic tariff was enacted, there had been one of the largest woolen factories in the country, employing over three thousand hands. From early in 1913 the business of that plant fell off, as purchasers, expecting the free tariff in woolen goods, slackened their purchases in that line several months before the Wilson tariff was enacted.

In November, 1913, that great woolen mill was shut down entirely, and not a wheel in it has ever turned since, and in which the overworked people being thrown out of employment.
